Python MATH

Python has a built-in module that you can use for mathematical tasks. The math module has a set of methods and constants.

Example Math Functions:

Creating Python program with math functions
st@ff@123

import math

```python
print(abs(-4))

print(math.sqrt(81))

print(math.pow(2,3))

print(max(81,82))

print(min(81,82))

print(round(81.9))

print(math.ceil(20.99))

print(math.floor(20.99))

print(math.trunc(22.33))

print(math.prod((2,3,4)))
```
